the invention relates to polymulation that include e.g. enzymes, and proteins involved in growth and development and receptors. (I) and (II) porteins involved in growth and development and receptors. (I) and (II) and be used in the prevention, diagnosis and treatment of diseases associated with inappropriate DITHP expression. For example, (I) and (II) expression by rectifying mutations or deletions in a patient's genome, that affect the activity of the DITHPs, by expressing inactive proteins or supplementing the patient's own production of them. (I) and (II) may be used to treat diseases, for example, cell proliferative disorder, or supplementing the patient's own production of them. (I) and (II) may be used to produce the DITHPs, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in camples, and therefore which patients may be in need of restorative captorative antibodies against DITHPs and in assays to identify modulators of DITHP captobes and activity. The anti-DITHP antibodies and anti-DITHP antibodies may also be used as diagnostic agents for detecting the arti-DITHP antibodies may also be used as diagnostic agents for detecting the anti-DITHP antibodies may also be used as diagnostic agents for detecting the greence of DITHPs in samples (e.g. by enzyme linked immunosorbant assay (ELISA)), AASJOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSSE-ABSOSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      541
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      239

The present sequence represents the nucleotide sequence corresponding to the 3' env region and long terminal repeat sequences from clone CL6 of Multiple Sclerosis retrovirus (MSKV-1). The specification describes a long terminal repeat (LTR)-RUS region which encodes the expression of a MSRV-1 protein. This is unusual for LTRs, in particular in the RUS region. The sequence includes CAAT and TATA signals which are present in the UB and R regions and are not directed towards the CDS indicated in the features table. Probes and antibodies to the MSRV-1 retrovirus protein and encoding polymucleotide sequences are used to detect the presence of MSRV-1 retrovirus in a biological sample. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      tide fragment of LTR-RUS region from Multiple Sclerosis retrovirus used to detect the presence of MSRV-1 retrovirus in a biological

and nucleic acid molecules encoding such proteins. EMBRY sequences are useful for screening modulators useful for treating or preventing disorders associated with abnormal expression of EMBRY. The disorders treated include reproductive disorders such as infertility. The disorders endometriosis, endometrial or ovarian tumour; autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), allergies, context dermatitis; disorders of the placenta such as preclampsia, abruptio placentae etc. Sequences of the invention are also useful for analysing a proteome of a tissue or a cell type. EMBRY proteins are useful as immunogens for preparing antibodies. Polynucleotides of the invention are useful for creating knockin humanised animals or transgenic animals to model human diseases. They are also used in gene therapy. The present sequence is human EMBRY-2 cDNA

transgenic organisms comprising a dithp nucleic acid sequence; the recombinant production of DITHP proteins; antibodies specific for DITHP proteins; microarrays comprising dithp nucleic acid sequences; methods of detecting dithp nucleotide and protein sequences; methods of screening for compounds which specifically bind a DITHP protein; and methods of sessessing the toxicity of test compounds using a dithp hybridiastion probe. Dithp nucleic acid sequences and DITHP proteins may be used in the diagnosis of a wide variety of conditions including cancer and other cell conditions of inflammatory disorders; bacterial, viral, fungal or parasitic infections; hormonal disorders; metabolic disorders; neurological disorders; gastrointestinal disorders; transport of sorders; and connective tissue disorders. They may also be used to screen for modulators of protein activity or gene expression. DITHP proteins can additionally be used in analysis of the proteome of a tissue additionally useful in somatic or germline gene therapy of the disorders mentioned above, as a source of antisense sequences, as a source of antisense sequences, as a source of continued and equal testing, and in transcript imaging the generation of transgenic animal models of human disease or knock in the present sequence represents a dithp cDNA encoding a DITHP protein continued in electronic format directly from MIPO at this patent did not form part of the printed specification, but was continued in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1050
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1110

This invention describes novel human secreted proteins encoded by polynucleotides isolated from human adult testes, adult brain, adult blood or adult placenta, or murine adult bone marrow or thymus cDNA libraries. The products of the invention are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, haemacopoiesis regulating e.g. as vaccines) or suppressing activity, activity, activity, chemotactic/chemokinetic activity, chemotactic/chemokinetic activity, receptor/ligand activity, activity, activity, cacherin/tumour invasion suppressor activity, anti-inflammatory activity, cacherin/tumour invasion suppressor activity, and tumour inhibition activity. The polynucleotides are also stated to be useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This is the human secreted protein AJ172 2 nucleotide sequence, obtained from a human adult testes CDNA library. The invention relates to secreted human and mutrine proteins. The polymocleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Detection of the levels of the proteins can be used for the diagnosis of e.g. pre-eclampsia, placental pathology or cancer. Agents which modulate the expression or function of the proteins may be used for treating a neoplastic disease and inhibiting metastasis. Other suggested cativities include nutritional activity (e.g. in feeds), cytokine and call proliferation/differentiation activity, immune stimulating de.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, cactivity, acceptor/ligand activity, anti-inhammatory activity, cacherin/tumour inhabition activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                10-APR-1997
02-JUN-1997
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    05-SEP-1997
```

The invention relates to a protein comprising fully defined AZ302 1

protein or BD127 1 6 protein. The polymucleotides are useful for

expressing recombinant proteins for analysis and are also useful as

chromosome markers or tags to identify chromosomes or to map related gene

chromosome markers or tags to identify chromosomes or to map related gene

continue. The proteins are useful as amino acid supplement, carbon

source, nitrogen source and carbohydrate source. The proteins are useful

corrections (erg. manned deficiencies and disorders (e.g. multiple

combined immunodeficiency (SCID)), autoimmune disorders (e.g. multiple

sclerosis, systemic lupus erythematosus, rheumatoid arthritis), allergic

cactions (e.g. asthma), myeloid or lymphoid call deficiencies,

cactions (e.g. asthma), myeloid or lymphoid system disease),

cosquise or osteoarthritis, peripheral nervous system disease),

cosquise syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease),

cappination disorders, inflammatory diseases (e.g. systemic inflammatory

responses syndrome (SIRS), ischaemia-reperfusion injury, Crohn's disease),

anaphylaxis and hypersenativity. Proteins are also useful for inducing

tumour immunity, for inducing bone, cartilage, tendon, ligament and/or

cregenerating nerve and brain tissue, for inducing fertility and for

inhibiting tumour growth. Proteins are also useful as chemokine for

mammalian cells (e.g., monocytes, fibroblasts, neutrophils), and also

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         2188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2308
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to identifying compounds which are modulators of syncytin expression. The syncytin modulators are useful in diagnosis and treatment of preeclampala and gestational trophoblast disorders (e.g. choriocarcinoma, hydatiform mole, placental site tumour and missed incomplete abortion). Syncytin is a human gene derived from the envelope gene of human endogenous defective retrovirus, HERV-W. The present invention is based partly on the discovery that syncytin expression is dramatically reduced in preeclampsia, and is also mis-localised to the apical syncytiotrophoblast membrane. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Identifying a compound for treating a subject with or at risk of developing preeclampsia, comprises determining whether the expression or activity of syncytin in the cell is modulated in the presence of a test compound.

The invention relates to isolated polymucleotide (I) and polypeptide (II)

sequences. (I) is useful as hybridisation probes, polymerase chain

reaction (PCR) Primers, oligomers, and for thromesome and gene mapping,

and in recombinant production of (II). The polymucleotides are also used

in diagnostics as expressed sequence tags for identifying expressed

cons. (I) is useful in gene therapy techniques to restore normal

activity of (II) or to treat disease states involving (II). (II) is

useful for generating antibodies against it, detecting or quantitating a

polypeptide in tissue, as molecular weight markers and as a food

supplement. (II) and its binding partners are useful in medical imaging

of sites expressing (II). (I) and (II) are useful for treating disorders

involving abbrrant protein expression or biological activity. The

polypeptide and polynucleotide sequences have applications in

diagnostics, forensics, gene mapping, identification of mutations

responsible for genetic disorders or other traits to assess biodiversity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           2488
                                                                                                                                                                                                                                                                                            protein. The specification describes a method for detecting expression of an envelope protein from a human endogenous retrovirus (HERV), in cells, of a tissue or culture. The method comprises detecting syncytia formation due to the fusogenic properties of the envelope protein. Envelope polypeptides and polymorleotides are used to produce therapeutic or prophylactic compositions, particularly for treatment of cancer, to correct defects in placental development (or other natural formation of other types of syncytia), and to promote adhesion of cells in grafts or cellular repair processes. Expression of sequences antisense to the polynucleotide are used to prevent formation of syncytia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCTCAGCCAATGCATGCCCTGGATTCTCCCCTTCTTAGGACCTCTAGCAGCTATAATATT 2140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ACCAATCAGAGGCTCACTAAAATGCTAATCAGGCAAAAACAGGAGGTAAAGCAATAGCC 720
                   retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulin- dependent diabetes and related pathologies) and of abnormal or susuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes associated with this susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                     120

The present sequence represents an endogenetic retrovirus, which is associated with an autoimmune disease, and is integrated into the human genome. The retrovirus is human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. HERV-W nucleic acid fragments, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid from human endogenous retrovirus, useful e.g. for diagnosis of autoimmune disease and complications of pregnancy, contains at least part of the gag gene.

RESULT 21
AAX25660
ID AAX25

```
This sequence represents clone cl.C4C5 of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or unsuccessful pregnancy and can be used as chromosomal markers for susceptibility to these conditions, or proximity markers of genes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

integrated into the human genome. The fragment is originally derived from a novel retrovirus, human endogenous retrovirus W (HERV-W). The HERV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell proliferation in vitro
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AATCATCTATTGCATGAGAGCACAGGAGGACAATGATCGGGATATAAACCCAAGTC 1021

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents clone cl.PH74 of the human endogenous retrovirus (HERV) W genome. The nucleic acids, their fragments or peptides encoded by them are markers of autoimmune disease (e.g. multiple sclerosis, rheumatoid polyarthritis, disseminated lupus erythematosus, insulindependent diabetes and related pathologies) and of abnormal or susceptiblity to these conditions, or proximity markers for associated with this susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AGGGGAAGAATGCTGTTATTATGTTAATCAATCCGGAATCGTCACTGAGAAAGTTGAAGA 2021
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid sequences from human endogenous retrovirus-W - expressed exclusively in placenta and useful in diagnosis and therapy of autoimmune disease, and abnormal or failed pregnancy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                   fragment, which is associated with an autoimmune disease, and is integrated into the human genome. The fragment is originally derived from a novel retrovirus, human genome. The fragment is originally derived from a novel retrovirus, human endogenous retrovirus W HERRV-W). The HERRV-W retrovirus is associated with autoimmune disease, failure of pregnancy or disorders of pregnancy. The nucleic acid fragment, or proteins derived from it, are useful for diagnosis of autoimmune disease (specifically multiple sclerosis) and for monitoring pregnancy. The nucleic acid fragments may also be used for in situ labelling of isolated chromosomes, while the transcription product can be used to study or monitor T cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AGGGAAGAATGCTGTTATTATGTTAATCAATCCGGAATCGTCACTGAGAAGTTGAAGA 2021

designated HERV-W. The present invention describes proteins or peptides (1) having superantigne (SAG) activity comprising the ENV protein (ENV) of HERV-W, the surface protein (SU) and transmembrane (TM) sub-units. (I) have neuroprotective activity, and can be used in: vaccines, antisensetherapped, and HERV-W SAG activity-inhibitors. (I) and encoding DNA/RNA are useful for diagnosing multiple sclerosis (MS) or HERV-W-associated disorders. (I) are also useful for identifying substances (and optionally cerovering) capable of binding to a retroviral superantigen associated with MS, substances capable of blocking transcription or translation of HERV-W retroviral superantigen. A protein or peptide derived from (I), modified to be devoid of SAG activity and being capable of generating an immune response against HERV-W retroviral SAG is useful in therapy. Nucleic acid activity and being capable of blocking transcription or capable of blocking SAG activity, capable of blocking transcription or expected sencenting (I) are useful as vaccines against MS. Substances capable of blocking SAG activity, capable of blocking transcription or prevention of HERV-W retroviral superantigen for use in translation or prevention of MS. (I) and nucleic acid becoding (I) are useful for the treatment and prevention of MS. (I) and nucleic acid senceding them are useful for diagnosing autoimmune disease. The present sequence encodes the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to human single exon nucleic acid probes fosm?

(SENP). The present sequence is one such probe. The SENPs are derived from human Hela cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                           Probe #4541 for gene expression analysis in human cervical cell sample.

The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPD
                                                                                                                                                                                              nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                          Claim 1; SEQ ID NO 4642; 639pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the from human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of freqions of genomic DNA predicted to encode protein. They are useful for gene discovery, and for determining predisposition and/or prognosing breast disease. Gene expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater diversity of probes for measuring gene expression, with far less bias than expressed sequence tag microarrays. The method is suitable for rapid production of functional information from ganners esquence is a single exon nucleic acid probe of the invention. Note: The present sequence is a single exon nucleic acid probe of the printed specification, but was obtained in the print of the printed sequence data for this in the present sequence data for this in this factor of the printed specification, but was obtained the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of the print of th

                                                                                                                                                                                                                                                                                                                                   The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system e.g. cardiovascular disease, hypertension, cardiac arrhythmias and congenital heart disease, Nopertension, cardiac arrhythmias and for form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                       Single exon nucleic acid probes for analyzing gene expression in human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1894 BP; 557 A; 500 C; 361 G; 476 T; 0 U; 0 Other;
